## NFC Museum-in-a-Box

An entire exhibition in just one case

### **Take your museum to visit your visitors – with the tuomi digital Museum-in-a-Box**

It's an inspiring museum experience made for all those people who can't come to you. tuomi's flexible, intuitive Travelling Museum takes your exhibition to people outside the museum. Anytime. Anywhere.

#### **How does it work?**

When you, or people in your audience, put the objects you have prepared on the Travelling Museum's NFC field, the integrated screen automatically shows the information, pictures, or anything else that you have linked to the object. Present them in any order you choose. Vary your presentation to meet the needs of your audience or let them decide. It is a playful and interactive

voyage of discovery into the world of your exhibition – intuitive and barrier free.

#### **Fun and inclusive**

Let your visitors touch the exhibits and discover what the Travelling Museum has to say about it. It is simple, playful, and intuitive. By using objects that are made to be touched and digital content designed for your audience (e.g., in easy-to-understand language or audio descriptions) you can have a fun and educational multilingual and barrier free exhibition that opens up new audiences for you, wherever and whoever they are.

#### **Flexible and customisable**

You choose the exhibits and the contents to go with it. The case's exhibit

compartment can be easily adapted to carry the objects you want to show. tuomi's flexible, browser-based content management system (CMS) allows for audio, video, text, interactive content and much more, all of which can be changed and expanded whenever you want.

#### **Always ready to go, always up to date**

The Travelling Museum is an excellent traveller. There is no need to worry about plugs and connections because it runs offline. If you use it over several days, you may have to charge it through a USB connection. And when you get back to the museum, you can change and update the content, so when it goes on the road again you are ready to show something new.

# Standard version: "small"

10" Multitouch display

On/off push button switch
